Adam Pawliński

Front-end developer

I constantly work to improve my portfolio, especially in scope of **JavaScript and React.js** technologies. Now I am working on commercial project - company site based on **SPA** principles and my own app to randomly choose person to give the presents to (using JavaScript). My portfolio also contains many projects made during 6-month long **Web Development Bootcamp** and other courses. I am ready to join developers team mostly to speed up my education and to prove myself that decision to change the industry to IT was adequate.
